

M365 Essential Managed Resilience

Microsoft 365 Protection Through Automated Compliance,
Backup & Recovery

Blue Island Security

NAVIGATE CYBER RISK

Key Features

Configuration Backup & Recovery Automated backup of 100,000+ M365 configurations ensuring rapid recovery from incidents

CIS Compliance Monitoring Continuous alignment with CIS security baselines & automated drift detection

Security Automation Proactive threat response & automated remediation workflows

Outcomes

Minimize downtime with instant configuration recovery & validated restoration procedures

Maintain continuous compliance with automated monitoring & remediation

Microsoft 365 houses 58% of organizations' sensitive cloud data yet lacks native configuration backup. Managing 10,000+ settings while maintaining security and compliance is overwhelming.

When disaster strikes or configurations drift, organizations face weeks of manual reconfiguration. Compliance gaps expose you to regulatory penalties and security breaches.

Essential Managed Resilience ensures your Microsoft 365 environment remains secure, compliant, and rapidly recoverable.

Protect your M365 investment with continuous resilience management...

Essential Managed Resilience delivers automated configuration backup, real-time compliance monitoring, and proactive security automation across your entire Microsoft 365 and Entra environment. We continuously validate your security posture against CIS benchmarks and maintain recovery-ready backups.

Our managed service eliminates the complexity of M365 security management while ensuring you can recover from any incident within hours, not weeks.

Comprehensive M365 Resilience Management

Blue Island Security's Essential Managed Resilience service provides continuous protection and rapid recovery capabilities for your Microsoft 365 environment, delivering peace of mind through automation:

What we'll do

1

Baseline & Backup
Complete configuration discovery & automated daily backups

2

Monitor & Alert
Continuous CIS compliance checking & drift detection

3

Automate & Secure
Deploy security workflows & remediation automation

4

Report & Optimize
Monthly resilience reporting & continuous improvement

Assumptions

- Access to Microsoft 365 tenant with appropriate permissions
- Monthly service reviews with designated stakeholders
- Initial baseline assessment completed within 5 working days
- Coverage for up to 5,000 users | Standard Microsoft 365 workloads
